Net Asset Value of HUF series:	7,012,685,887 HUF
Net Asset Value per unit:	1.569834 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to create for its investors an investment portfolio that generates a positive yield under all circumstances; in other words, it takes a 'total return' approach. It does this by using various analysis techniques to select the asset classes and investment funds that have the greatest potential to appreciate in value, and by investing in the shares of investment funds and in collective investment securities. The fund primarily invests its capital in the funds managed by Aegon Hungary Investment Fund Management, but it may also purchase other investment funds and collective investment securities for its portfolio for the purpose of diversification, if the given asset class is not yet covered by the fund management company's own funds. Indirectly, the fund is capable of accessing the entire known investment universe of today through the purchase of investment fund shares (in bond markets, money markets, equity markets, property market, private equity, derivatives and other regulated and OTC derivative products, commodity-market products, currencies etc.), and of making its investments both at domestic and international level. To ensure liquidity, the fund may hold discount treasury bills and government bonds issued by the State Debt Management Centre (ÁKK), interest-bearing securities guaranteed by the State of Hungary, and bonds issued by the National Bank of Hungary. In order to achieve a positive yield, the fund makes active use of risk management procedures and carefully selects the position size of its riskier investments. Since the range of investments includes foreign currency-denominated investments, ETFs and investment fund shares, investors in the fund are also exposed to currency risk. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in order words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%, except AEGON Money Market Fund, AEGON Domestic Bond Fund, AEGON MoneyMaxx Express Fund, AEGON Alfa Derivative Fund, AEGON Central European Credit Fund and AEGON Ózon Capital Protected Fund.

Annualized standard deviation of the benchmark's weekly yields:	0.00 %
WAM (Weighted Average Maturity):	0.00 years
WAL (Weighted Average Life):	0.00 years

MARKET SUMMARY:

Although the major stock indices closed at new all-time highs by the end of the month, the markets were volatile in March. U.S. long-term yields hit a 2-year high, to which stock markets reacted with fierce price movements. At first, investors reallocated from the growth sector to the value-based sector because of the rate rise, but when interest rates fell slightly, money flowed back into the growth sector again. It didn't help the investment environment that after the March the FOMC decision, the Fed president could not reassure the markets. Powell has finally stated that the central bank will not raise interest rates until at least 2023, but has not been able to give a meaningful answer as to what they will do if inflation is significantly higher than the forecast. Although the virus is still not under control in Europe, economic data show that the light is already visible at the end of the tunnel. The Manufacturing Purchasing Managers' Index jumped to an all-time high of 62.4 from a previous month's 57.9 and an expected 57.6. The key interest rate and the asset purchase program were not changed by the ECB at the interest rate decision meeting, and it was heavily emphasized, that they would not intervene during a temporary rise of inflation. Although the economies of China and other Asian countries may already be behind the crisis caused by the corona virus, it seems that, even temporarily, the Chinese economy has begun to slow down. The official Chinese manufacturing PMI fell to 50.5 after 51.3 in January, while Caixin's smaller company index fell from 51.5 to 50.9. The coming months will show whether this is just a temporary slowdown or whether we can expect a more serious slowdown. The forint approached last November's high in March, but by the end of the month closed where it started. The MNB fine-tuned its framework of the asset purchase program: they announced that the 50 per cent purchase limit on bonds' series had been abolished, while the weekly purchase volume would not change. They basically expanded the room for maneuvering in longer-term papers, having previously reached the earlier limits here. What is also worth mentioning is that the central bank is already expecting inflation of 4% or more for this year. The fund achieved a slight positive return in March. The best return of the fund's investments was achieved by the Marathon fund, followed closely by Alfa, but Panorama was also able to close March with a positive return, while Moneymaxx suffered a slight decline due to events in the Turkish market.
