Total Net Asset Value of the whole Fund:	21,832,953 EUR
Net Asset Value of EUR series:	992,593 EUR
Net Asset Value per unit:	1.088491 EUR

## INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with capital appreciation by investing in the sovereign- and quasi-sovereign bond market of Emerging European countries. The fund has no rating constraints, the fund has a permission to invest in any kind of issuer without limitation on its long-term foreign currency debt rating. The fund aims to reach the highest capital gain with rational risk taking. The fund primarily invests on the sovereign- and quasi-sovereign bond market of Emerging European countries denominated in foreign currency, but holds Hungarian local currency, long- and short-term bonds with diversification and liquidity management purposes. The fund may also invest in mortgage backed securities, and short- and long-term, fixed or floating securities of other financial institutions, municipalities or other business corporations, structured and convertible bonds. The fund's general risk level and the measure of the deviation from the target weights are determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The core part of the fund consists of the foreign currency denominated, sovereign and quasi-sovereign bonds of Central and Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), Southeast Europe (Serbia, Turkey), Baltic states (Lithuania, Latvia) and the countries of the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and also holds Hungarian local currency bonds with diversification and liquidity management purposes. In case of attractive market conditions (e.g. possible upgrade of an issuer's long-term foreign currency debt rating, change of the yield curve, market mispricing, etc.) the fund may invest in bonds of issuers not listed above. The fund does not intend to invest more than 25% of its assets in a single country. The target weight for the fund's fixed income investments in the above listed countries (target countries) is 95%. The aimed risk profile of the fund is intermediate. We do not use constraints on foreign currency debt ratings. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged debt-type collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged to the target currency (USD), although depending on market circumstances the fund may even have an open currency position. The investment policy of the fund changed on the 30th of December, 2016. Since then the fund has no benchmark, and fund performance before the change is not applicable.

## MARKET SUMMARY:

Last month, the ECB reiterated its assumptions that it will manage PEPP purchases over the current quarter at a significantly faster pace than in the first quarter of the year. Eurozone PMIs improved slightly, suggesting that price pressure in manufacturing has continued. The Fed left its monetary policy and guidance unchanged while showing little concern for rising inflation. The US President Administration released details of its American Families Plan, which calls for USD 1.8tn in spending and tax credits for education and health care. The US 1Q21 GDP expanded by 1.6% QoQ, but in the Eurozone, it fell by 0.6% QoQ. 10Y Bund and UST yields rose by 6-8bp, this time almost exclusively driven by a surge in breakeven rates. In equity markets, strong company earnings were supportive but failed to provide fresh impulses. A decent string of new bond issuance notwithstanding, European high-yield and hybrid corporate credit spreads tightened slightly. EUR-USD was close to concluding a 3.5% advance in April at levels slightly above 1.21. We closed short positions in the U.S. ultra-long government papers as well as added short positions in the 10Y German government bonds along with sticking to short 10Y US Treasuries positions, we further decreased exposure Hungary and Romania while increased ones to Ukraine, Ivory Coast and Qatar, the duration for all other countries remained at neutral levels during the month.
