Total Net Asset Value of the whole Fund:	117,826,301 PLN
Net Asset Value of institutional series:	315,583 PLN
Net Asset Value per unit:	1.115415 PLN

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index. The fund is a standard variable net asset value money market fund. The portfolio elements are selected in accordance with these and the Money Market Funds' principles. The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Polish Debt Management Agency, and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is allowed to invest in securities issued or guaranteed by any EU member state, and in money market instruments issued or guaranteed by a supranational institution established in the EU in accordance with the Money Market Funds Regulation. The fund is only allowed to invest in debt securities, which are classified as investment grade on average by the external credit rating agencies. In addition, some financial assets, which are particularly addressed by the EU wide money market regulation, shall have a favourable assessment based on the internal credit quality assessment procedure. The fund may also hold investment units or shares within the framework of the Money Market Funds Regulation. The Fund invests at least 50% of its assets in PLN denominated assets (money market instruments issued or guaranteed by the Polish state; deposits; cash), also fulfilling the diversification requirements of the Money Market Funds Regulation. The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days. The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%). Aegon Polish Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Polish Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Polish Moneymarket Fund is capable of fluctuation. Aegon Polish Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY:

The Polish bond market had a mixed performance in April. The decline in yields seen until mid-April was mainly due to the asset purchase program, as the central bank bought more government bonds in the last two tenders than in the last six months combined. In the second half of the month, however, yields corrected and we witnessed a more significant rise in yields on the back of the inflation data released at the end of the month. Overall, yields on the 3 and 5-year maturities ended the month where they started, while yields on the 10-year maturity rose by 11 basis points compared to the beginning of the month. Moving on to economic data, Polish GDP is expected to grow by 4% this year and 4.8% in 2022, according to the April expectations. First quarter GDP growth was revised up to -1.5% and second quarter GDP growth was revised down to 8.5% from 8.7%. Year-on-year inflation accelerated to 4.3% in April, finishing well above expectations. This has put some pressure on the central bank, but Governor Glapinski continues to believe that inflation will return to the 2.5% level, which will not require an interest rate hike. The purchasing managers' index fell to 53.7 in April from 54.3 in March. All components of the index contributed positively to the reading, which has not been seen since July 2018. Industrial production grew by 18.9% in March, largely helped by last year's low base. As for the general government, the state generated a deficit of PLN 4,295.2 million in February, bringing the 12-month rolling budget deficit to 3.27% of GDP.
