Start:	03/19/2021
Currency:	HUF
Total Net Asset Value of the whole Fund:	3,951,527,002 HUF
Net Asset Value of institutional series:	2,453,756 HUF
Net Asset Value per unit:	0.972261 HUF

## INVESTMENT POLICY OF THE FUND:

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

## MARKET SUMMARY:

Last month, the ECB reiterated its assumptions that it will manage PEPP purchases over the current quarter at a significantly faster pace than in the first quarter of the year. Eurozone PMIs improved slightly, suggesting that price pressure in manufacturing has continued. The Fed left its monetary policy and guidance unchanged while showing little concern for rising inflation. The US President Administration released details of its American Families Plan, which calls for USD 1.8tn in spending and tax credits for education and health care. The US 1Q21 GDP expanded by 1.6% QoQ, but in the Eurozone, it fell by 0.6% QoQ. 10Y Bund and UST yields rose by 6-8bp, this time almost exclusively driven by a surge in breakeven rates. In equity markets, strong company earnings were supportive but failed to provide fresh impulses. A decent string of new bond issuance notwithstanding, European high-yield and hybrid corporate credit spreads tightened slightly. EUR-USD was close to concluding a 3.5% advance in April at levels slightly above 1.21. We slightly adjusted portfolio composition by selling some short-term Italian government papers during the month.

## ASSET ALLOCATION OF THE FUND ON 04/30/2021
