Total Net Asset Value of the whole Fund:	5,503,277,769 HUF
Net Asset Value of HUF series:	3,644,061,491 HUF
Net Asset Value per unit:	3.243024 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

In April, systematic vaccination against Covid-19 continued in the developed world. Vaccine companies have started to ramp up vaccine production, so it is probably safe to say that by the end of May or early June, those in the developed world who ask for the vaccine will get it. The most spectacular progress has been made in the United States, where more than 35% of the population has already been vaccinated, and since mid-April there have been no restrictions on vaccination, so anyone of any age can get the vaccine. In Europe, vaccine availability varies by country. In Hungary, everyone who has applied can now get the vaccine, while in Germany the same is expected by the end of June. If the vaccination schedule continues at this rate, there is a chance for the developed world to see a "normal" summer season unfold. The the major indices hit new all-time highs, thanks to the lower US yields. At the moment there is a so-called "goldie lock" scenario, which means that interest rates are higher than before but not high enough to hurt stock markets and at the same time the economy is growing. Economic forecasts remain positive and although there is already a noticeable inflation in the economy, but not high enough to cause serious damage to companies. There is finally some good news about the corona virus in Hungary. Although the mortality rate is still very high, one of the worst in the world on a population basis, but the vaccination rate is one of the best. The government has ordered a reduction in restrictions, and restaurants have been allowed to open, albeit with some restrictions. This positive change is reflected in the forint exchange rate. It moved in a relatively narrow range, closing the month near the 360 level. The fund posted a negative return in April and underperformed its benchmark. The fund has not changed much over the past month. We have reduced risk in the fund due to the perceived rise in global yields. The oil and steel sectors remain overweight, reflecting the fact that the world economies continue re-open and this is good for these two sectors. The oil sector underperformed slightly in April, but we remain positive on the sector. The agricultural sector is also overweight, and within the sector the fertilizer producers. Agricultural crop prices have risen a lot in recent months and this is good for this sector. We are still holding the airlines because they are lagging behind their peers in the same sector. The fund was flat against the benchmark at the end of the month.

ASSET ALLOCATION OF THE FUND ON 04/30/2021
