

MARKET SUMMARY

Late July, the Fed left monetary policy unchanged and, as it was read by the market, took a step towards tapering by saying that the economy has made progress (despite not substantial) towards the Fed's goals. US GDP in the second quarter of the year expanded by a weaker-than-expected 1.6% QoQ (non-annualized) and by a better-than-expected 2.0% QoQ in the Eurozone. Eurozone inflation came as a surprise at 2.2% YoY, while core CPI inflation eased due to a technicality related to the timing of the summer sales. OPEC+ decided to boost production by an extra 400,000 barrels a day each month from August through December and raised the UAE's production baseline. In the last week of July, Bunds and USTs remained well bid. EURUSD rebounded back towards 1.19 after a still-dovish Fed and lower-than-expected US GDP. Emerging market equities came under pressure after stocks slid by up to 9% in China on regulatory woes. Equity markets in developed countries shrugged off the move and were quickly back at around all-time highs, supported by healthy earnings. Eurozone investment-grade financial and non-financial debt tightened by 3bp, while high-yield lagged.

INVESTMENT POLICY OF THE FUND

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums.

The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund.

When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions.

The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position.

The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.
