

MARKET SUMMARY

Polish bonds had a mixed performance in July. The fall in yields in the developed markets led to increased volatility in the Polish bond market, which later corrected on rising inflation fears, but still ended the month slightly lower. Moving on to economic data, Polish GDP is expected to grow by 4.8% this year, 5% next year and 4.1% in 2023. Bloomberg's July research forecast second-quarter growth of 10.4% and third-quarter GDP growth was revised up to 4.9% from 4.5%. Inflation on an annualized basis in July was estimated to have risen to 5% from 4.4% in the previous month, beating expectations. Prices in Poland have not risen so much in almost 10 years, but this may change only slowly the ultra-loose monetary policy relative to the region. Poland's interest rate policy has thus diverged from that of other countries in the region, as the central bank in Hungary and the Czech Republic have also raised interest rates. The purchasing managers' index fell to 57.6 points in July from 59.4 points in June, below market expectations. Production and new orders also grew at a slower pace during the month. Industrial production grew by 18.4% in June, slightly below market expectations. As for the general government, the state generated a surplus of PLN 18,641.2 million in the fourth month, reducing the 12-month rolling budget deficit to 1.65% of GDP.

INVESTMENT POLICY OF THE FUND

The aim of the investment fund is to give investors access to the Polish bond market and to function as a relatively stable, medium-risk investment already medium term, offering our customers stable real returns without the need to tie up their savings for a fixed period. The fund primarily invests into Zloty denominated Polish government bonds but the portfolio manager has some room to use other fixed income investments. We aim to maximise returns with the given risk level. Our investment decisions are based on fundamental research extended by technical research while we also take into account global market sentiment. Expected shifts in the yield curve based on our macro expectations are at the core of our investment process. Risk/return characteristics are also considered when we select suitable and safe investments. We aim to totally hedge any currency risk in the fund.
