

MARKET SUMMARY

In June, year-on-year inflation accelerated to 5.3%, the fastest rate in almost 8 years. In July, the rise may have eased somewhat, as the central bank started an interest rate hike cycle in June by 30 basis point, and the second increase of another 30 basis point came in July. In addition to the base rate, the overnight deposit and lending rates were also raised, bringing all major interest rate conditions into positive territory. The tightening will not end there, with another 30 basis point increase expected in August. The larger-than-expected hike also led to a strengthening of the forint. In July, 3-month FX implied yields rose from 77 basis points to 93 basis points, while 12-month FX implied yields rose from 120 basis points to 147 basis points. Liquidity was ample, with the DKJ shortage pushing average yields in the 3-month auctions down to around 50 bps and the last 12-month DKJ auction of the month saw average yields rise to 97 bps. With ample liquidity, the DKJ market is still dry, but there are already signs of reduced demand, with the oversubscription rate for the paper falling as the month draws to a close.

INVESTMENT POLICY OF THE FUND

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund.

The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation.

The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days.

The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%).

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.
