

INVESTMENT POLICY OF THE FUND

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, the Czech Republic, Poland, Austria and Romania, Slovenia and Croatia, and secondarily Slovenia Croatia, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. Derivative transactions in equities and indices are allowed for the purpose of ensuring an efficient portfolio structure while shaping the fund's portfolio. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary,

MARKET SUMMARY

In August, markets continued their march to new highs and another record was broken. So far, the number of new highs set in August was 11, which occurred in 1929, followed by 10 in 1987. Both are notable, as these two years saw the two biggest market falls of the 20th century. We don't know if 2021 will be remembered for this, but it is safe to say that the current market overvaluation far exceeds that of 1929 and 1987. The economic structure now is completely different from what it was then. The growth of the economies was not so dependent on the performance of stock markets, which puts the current market conditions in a different perspective. Thanks to the continuous intervention of central banks, stock markets no longer reflect the real valuation of the real economies, but the liquidity provided by central banks. If this flow of money were suddenly stopped, there would be another crash regardless of the performance of the real economies. The US Federal Reserve wants to avoid this at all costs, and will do everything in its power to do so. The Jackson Hole meeting in August was held in this spirit, when Fed President Jay Powell implicitly suggested that the money supply would not be turned off. Although he hinted that not everything is going the way the Fed would like, he said that the time for financial tightening had not yet come. In Hungary the central bank has raised the interest rate by another 30 basis points to 150 basis points. The central bank's clear aim is to keep inflation in check without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably around the EUR/HUF 350 exchange rate. With inflation on the rise around the world, it is possible that the central bank will be forced to raise interest rates further in order to keep Hungarian inflation inline. The fund achieved a positive return in August, but underperformed the benchmark index. The fund remains overweight in the Austrian, Hungarian and Polish markets. During the month, we changed the allocation in the energy sector by selling Hungarian, Austrian and buying Polish equities. In the retail and gaming sectors we realized profits and thus reduced their weights during the month, while increasing the bank sector's weight. The retail sector remains overweight in the fund, while the telecom and utilities sectors underweight. Overall, the fund is overweight against the benchmark index at around 108% due to long positions.
