

INVESTMENT POLICY OF THE FUND

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

MARKET SUMMARY

The ECB provided new forward guidance on the monetary policy, stating that a key condition for lift-off is that inflation is seen to be reaching 2% "well ahead of the end of the projection horizon and durably for the rest of the projection horizon". The EU inflation reading for last month accelerated more than expected, to 3.0% YoY from 2.2%, driven by a well-built rebound in core inflation. ECB hawks are more vocal now, call for a reduction of PEPP purchases in Q4 '21 and termination of the program in the first quarter next year. 10Y Bund yields have risen further, consolidating above the -0.40% mark. Bond markets were calm for most of August before the surprise in Eurozone inflation triggered a sell-off in EGBs. Equity markets recorded modest gains, continuing their positive trend in the last few weeks, with the STOXX Europe 600 and the S&P 500 reaching new all-time highs ten times in August. Overall commodity market stayed range-bound. Exchange rates have remained mostly within tight trading ranges. Prospects of dovish Fed tapering ultimately lifted EUR-USD back above 1.18. We made a minor change to the portfolio composition by selling some short-term US government bonds.
