

INVESTMENT POLICY OF THE FUND

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund.

The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation.

The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days.

The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%).

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In August, year-on-year inflation surged to 4,9% above market expectations, from the 4,6% from the previous month. With this print, price increase turned upwards again after a slight decrease in July. At its August meeting, the central bank raised the base rate for the third time by 30 basis points. The tightening of monetary policy will be reviewed in the September Inflation Report, but the upward inflation path still justifies the continuation of the cycle. The forint was holding steady after the rate hikes, approaching the 345 level. In August, 3-month FX implied yields rose from 93 basis points to 120 basis points, and 12-month FX implied yields rose from 147 basis points to 156 basis points. Liquidity was ample, with average yields in the 3-month DKJ auctions rising to around 82 bps and the last 12-month DKJ auction of the month increasing to 108 bps. DKJ yields have started to converge towards the base rate level this month, but it is still relatively expensive to get short paper in the market.
