

INVESTMENT POLICY OF THE FUND

The Fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital market instruments, which the Fund can optimize through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a "total-return fund", which means that instead of concentrating on just one sub-sector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these, the Fund may also buy shares listed in the domestic or foreign share markets, and it may also hold foreign treasury instruments, bank and corporate bonds in its portfolio. The Fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims at constantly changing this ratio within broad range, indeed, it is also prepared to take on currency risk through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks. Keeping in mind the efficient establishment of the portfolio, the Fund may also open futures positions.

MARKET SUMMARY

September had similar movements in the stock markets just like the previous months. Indices rose to new highs, but unlike in the previous period, stock markets got over valued I'll after the first week and ended the month in negative territory. The US legislature failed to agree on the budget for next year and the US is in danger of another government shutting down. This already has happened in the early 2010s, when a credit rating firm downgraded the US government's debt in response. In the middle of the month, the US Federal Reserve also met and gave the strongest signal yet that it would start reducing liquidity as early as this year, and aim to complete the process by next summer, which would mean a \$15 billion a month reduction in bond buying. Nine of the 13 voting FOMC members expect an interest rate hike as early as next year. That would put the Fed funds rate to 1% by the end of 2023 which would also be higher than expected. Investors have grown accustomed to the abundance of money provided by the central banks in recent years, and this withdrawal could cause serious problems. The central bank chairman is trying in vain to communicate that reducing liquidity is not the same as raising interest rates if the combined effect is the same for financial markets. In Europe, the ECB took a similar decision to the US at its September meeting, except that they are targeting yields rather than volume. The ECB's communication for years has been that they are targeting an inflation rate of 2%. In Hungary, the central bank raised the benchmark interest rate by a further 15 basis points in September to 165 basis points. The MNB's communication shows that QE has been reduced from 50 billion to 40 billion, bond purchases are mainly targeting the long side and forint swap liquidity is being reduced to achieve higher interest rates. The central bank's clear aim is to contain inflation without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably in the EUR/USD 350-360 range. The fund posted a negative return in September. On the bond side, we bought Mexican local currency bonds during the month, took profits on Romanian local currency bonds, sold Turkish bonds after the unexpected interest rate cut and stopped out on some of the Ghanaian bond positions that we bought last month. On the equity side, we bought selective Chinese, global emerging market sector, and uranium mining stocks. On the commodity side, we bought a commodity index sector fund for 1% of the fund. On the currency side, the fund is slightly long the forint against the euro and the dollar, but short the Romanian leu and Mexican peso. We are also long the dollar against the Turkish lira and long the Polish zloty against the euro.

GENERAL INFORMATION
