

## INVESTMENT POLICY OF THE FUND

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY

September had similar movements in the stock markets just like the previous months. Indices rose to new highs, but unlike in the previous period, stock markets got over valued I'll after the first week and ended the month in negative territory. The US legislature failed to agree on the budget for next year and the US is in danger of another government shutting down. This already has happened in the early 2010s, when a credit rating firm downgraded the US government's debt in response. In the middle of the month, the US Federal Reserve also met and gave the strongest signal yet that it would start reducing liquidity as early as this year, and aim to complete the process by next summer, which would mean a \$15 billion a month reduction in bond buying. Nine of the 13 voting FOMC members expect an interest rate hike as early as next year. That would put the Fed funds rate to 1% by the end of 2023 which would also be higher than expected. Investors have grown accustomed to the abundance of money provided by the central banks in recent years, and this withdrawal could cause serious problems. The central bank chairman is trying in vain to communicate that reducing liquidity is not the same as raising interest rates if the combined effect is the same for financial markets. In Europe, the ECB took a similar decision to the US at its September meeting, except that they are targeting yields rather than volume. The ECB's communication for years has been that they are targeting an inflation rate of 2%. In Hungary, the central bank raised the benchmark interest rate by a further 15 basis points in September to 165 basis points. The MNB's communication shows that QE has been reduced from 50 billion to 40 billion, bond purchases are mainly targeting the long side and forint swap liquidity is being reduced to achieve higher interest rates. The central bank's clear aim is to contain inflation without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably in the EUR/USD 350-360 range. The fund achieved a positive return in September and slightly underperformed its benchmark index. During the month we closed the underweight position in the fund, but within the developed markets, we underweighted the US market versus Japan and Europe. Our view remains that the US market is highly overpriced, while the Japanese and European markets are relatively underpriced. In addition, we bought a few individual stocks in the fund, mainly those where we believe they are underpriced relative to their fundamental value.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Citibank Europe plc Magyarországi Fióktelepe
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	100% MSCI World Net Total Return USD Index
