

## INVESTMENT POLICY OF THE FUND

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible.

Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union.

The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

## MARKET SUMMARY

The main concern for the investment world remains when and how much the US Federal Reserve will raise interest rates. It is now widely accepted that tapering will start soon, but opinions are still divided on the timing of the rate hikes. The Fed chairman has repeatedly stressed that the ending of monetary easing does not equate to an interest rate rise, the question is how the equity markets will interpret the Fed's action. The bigger issue is inflation. At the beginning of the year, the Fed chairman was emphatic that inflation would only be temporary and that he did not think it would cause serious problems for the economy. Later, when asked for his definition of "temporary", he gave an interesting answer that risked losing the rest of his credit. More recently, not once did the Fed's communiqué use the word 'transitory', they seem to have accepted the fact that inflation will be here for a longer period of time.

In Europe, the ECB is communicating exactly the same as the US Federal Reserve, and facing the same problems. High frequency indicators show that Eurozone residential activity is back to pre-pandemic levels, with the use of many services, while job vacancies are rising steadily. As in the United States, with inflation soaring, more and more German employees are demanding higher wages from their employers, and a wave of strikes could be on the way. This is of course generating inflation, which is reflected in the monthly economic figures.

In Hungary, the central bank raised the benchmark interest rate by a further 15 basis points in September to 180 basis points. The central bank's clear aim is to keep inflation in check without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably in the EUR/USD 350-360 range. With inflation on the rise around the world, it is possible that the central bank will be forced to raise interest rates further in order to keep Hungarian inflation manageable.

The fund achieved a positive return in October. On the equity side, we bought a European bank index and took a profit on a regional bank. On the commodity side, we added to our existing exposure to gold, coffee, sugar and live cattle, and bought platinum but sold it after it rallied significantly.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Citibank Europe plc Magyarországi Fióktelepe
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	100% RMAX Index
ISIN code:	HU0000714290
Start:	01/21/2015
Currency:	PLN
Net Asset Value of the whole Fund:	8,119,595,019 HUF
Net Asset Value of PLN series:	2,121,915 PLN
Net Asset Value per unit:	0.990301 PLN
