

INVESTMENT POLICY OF THE FUND

The aim of the fund is to create for its investors an investment portfolio that generates a positive yield under all circumstances; in other words, it takes a 'total return' approach. It does this by using various analysis techniques to select the asset classes and investment funds that have the greatest potential to appreciate in value, and by investing in the shares of investment funds and in collective investment securities.

The fund primarily invests its capital in the funds managed by Aegon Hungary Investment Fund Management, but it may also purchase other investment funds and collective investment securities for its portfolio for the purpose of diversification, if the given asset class is not yet covered by the fund management company's own funds.

Indirectly, the fund is capable of accessing the entire known investment universe of today through the purchase of investment fund shares (in bond markets, money markets, equity markets, property market, private equity, derivatives and other regulated and OTC derivative products, commodity-market products, currencies etc.), and of making its investments both at domestic and international level.

To ensure liquidity, the fund may hold discount treasury bills and government bonds issued by the State Debt Management Centre (ÁKK), interest-bearing securities guaranteed by the State of Hungary, and bonds issued by the National Bank of Hungary.

In order to achieve a positive yield, the fund makes active use of risk management procedures and carefully selects the position size of its riskier investments. Since the range of investments includes foreign currency-denominated investments, ETFs and investment fund shares, investors in the fund are also exposed to currency risk.

In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in order words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%, except AEGON Money Market Fund, AEGON Domestic Bond Fund, AEGON MoneyMaxx Express Fund, AEGON Alfa Derivative Fund, AEGON Central European Credit Fund and AEGON Ózon Capital Protected Fund.

MARKET SUMMARY

The main concern for the investment world remains when and how much the US Federal Reserve will raise interest rates. It is now widely accepted that tapering will start soon, but opinions are still divided on the timing of the rate hikes. The Fed chairman has repeatedly stressed that the ending of monetary easing does not equate to an interest rate rise, the question is how the equity markets will interpret the Fed's action. The bigger issue is inflation. At the beginning of the year, the Fed chairman was emphatic that inflation would only be temporary and that he did not think it would cause serious problems for the economy. Later, when asked for his definition of "temporary", he gave an interesting answer that risked losing the rest of his credit. More recently, not once did the Fed's communiqué use the word 'transitory', they seem to have accepted the fact that inflation will be here for a longer period of time.

In Europe, the ECB is communicating exactly the same as the US Federal Reserve, and facing the same problems. High frequency indicators show that Eurozone residential activity is back to pre-pandemic levels, with the use of many services, while job vacancies are rising steadily. As in the United States, with inflation soaring, more and more German employees are demanding higher wages from their employers, and a wave of strikes could be on the way. This is of course generating inflation, which is reflected in the monthly economic figures.

In Hungary, the central bank raised the benchmark interest rate by a further 15 basis points in September to 180 basis points. The central bank's clear aim is to keep inflation in check without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably in the EUR/USD 350-360 range. With inflation on the rise around the world, it is possible that the central bank will be forced to raise interest rates further in order to keep Hungarian inflation manageable.

The fund achieved a positive return in October. Among the fund's investments, the best return was achieved by the Panorama fund followed by Marathon, but Moneymaxx also produced a slight positive return while Alfa did not increase its value in October.
