

INVESTMENT POLICY OF THE FUND

The Fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital market instruments, which the Fund can optimize through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a "total-return fund", which means that instead of concentrating on just one sub-sector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these, the Fund may also buy shares listed in the domestic or foreign share markets, and it may also hold foreign treasury instruments, bank and corporate bonds in its portfolio. The Fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims at constantly changing this ratio within broad range, indeed, it is also prepared to take on currency risk through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks. Keeping in mind the efficient establishment of the portfolio, the Fund may also open futures positions.

MARKET SUMMARY

In November, it seemed that the Covid pandemic became a non-factor because of the vaccination and would be just a bad memory, but unfortunately, a potentially more infectious strain had developed in South Africa by the end of the month. Within a short period of time, the new strain has appeared around the world and the question now is how governments will respond to this new challenge. Very little is known about the new variant, communication will mostly consist of encouraging the public to take the 3rd jab. If we are lucky, the current vaccines will provide enough protection against the new variant, if not then the corona virus will continue to cause problems for a long time. We do not think that there will be the repeat of the level of closures that we saw in the first or second wave. In the US, speculation continues as to when the Fed will raise interest rates. Current pricing suggests the first hike will be next June, followed by two more. At the November Fed meeting, it was also announced that they would start the tapering by \$15 billion per month. In Europe, the ECB President again rejected the possibility of any monetary tightening, in contrast to the Fed, stating that rising energy prices have already pushed household spending incomes into negative territory. In Hungary, the central bank raised the benchmark interest rate by a further 30 basis points in November to 2,10%. In addition, the Hungarian National Bank reintroduced the 2-tier interest rate regime in order to stabilize the forint exchange rate. The result is that the official interest rate is 2.10% while the weekly deposit rate is 3.10%. The central bank's clear aim is to keep inflation in check without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably around the EUR/USD 360 level. The fund posted a negative return in November. On the bond side, in local currency bonds, we took profit on the Mexican exposure, we sold the Polish exposure at a loss, but unfortunately the other exposures showed losses at the end of the month. In hard currency bonds, we reduced the Turkish duration. On the equity side, we took profits in the DAX and bank index positions and bought shares in a company related to uranium production. At the end of the month we bought some oil after a sharp sell-off and hedged the portfolio with the sale of SP500 futures. On the currency side, we opened a 10% forint long position against the euro.
