

## INVESTMENT POLICY OF THE FUND

The fund aims to create an explicitly defensive investment portfolio for its investors, and typically invests in developed-market government bonds, and related exchange-traded derivative transactions, in the interest of achieving the highest possible return with the assumption of currency risk. The fund primarily aims for a portfolio consisting of the publicly issued bonds of foreign governments and foreign-domiciled companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, when purchasing international securities the fund only selects publicly issued securities that are listed on foreign stock exchanges. The proportion of non-investment-grade securities is maintained at a low level, and if the planned ratio is overstepped due to the downgrading of a given issuer the fund restores it under the conditions stipulated by the relevant legal provisions. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. In the course of its operation, however, the fund is managed on the premise that when compiling the portfolio, it is bonds that determine the nature of the fund. Accordingly, the proportion of bonds that may be kept in the fund at any given moment may reach the prevailing statutory maximum. When compiling the bond portfolio, taking into account the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. To ensure liquidity, the fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds; however, in accordance with the current statutory regulations the proportion of foreign bonds in the portfolio may be up to 100%. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory conditions.

## MARKET SUMMARY

Last month, the Chinese Communist Party approved President Xi's historical designation, paving the way for a third term as president. The EC published its updated projections that showed Eurozone inflation above 2.0% next year but well below the ECB's target in 2023. Some European countries introduced new restrictions aiming to slow an increase in covid-19 infections. Austria took the most drastic steps so far, imposing a nationwide lockdown and making vaccination compulsory from Feb 1st. Later on, fears arose over a new coronavirus variant identified in South Africa that could reduce the effectiveness of vaccines. US President Joe Biden nominated Mr Powell for a second term as Fed chair. The publication of the FOMC minutes indicated that "various" participants were prepared to speed up the tapering and hike rates earlier if inflation continued to run higher than its objective. In Germany, the SPD, Greens and FDP agreed on a coalition treaty including a substantial increase in public investment. After having been under pressure due to intensifying discussions over the speed of Fed tapering and the characteristics of post-PEPP purchases, UST and Bund yields fell back abruptly on renewed covid-19 concerns. The change in mood weighed on corporate spreads and equity markets. EUR-USD pulled back to above 1.12 while USD-TRY breached 13 levels. During the month, we cut in half positions in short-term Russian bonds and closed Bund short positions, we kept all other positions unchanged.

## GENERAL INFORMATION
