

INVESTMENT POLICY OF THE FUND

The fund aims to profit from the return on global equity market investments, through share price gains and dividend income. The bulk of its portfolio is made up of the publicly listed shares of foreign companies. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. However, the fund is managed on the premise that when compiling the portfolio, it is shares that determine the nature of the fund. Accordingly, the proportion of shares that may be kept in the fund at any given moment may reach the prevailing statutory maximum. The fund management company is permitted, at its own discretion, to hedge all or a part of its currency risks with forward currency positions, in compliance with the statutory requirements. When compiling the share portfolio, taking into consideration the macroeconomic environment of the investment markets, the aim is to build up a long-term investment portfolio primarily on the basis of fundamental analyses. In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY

In November, it seemed that the Covid pandemic became a non-factor because of the vaccination and would be just a bad memory, but unfortunately, a potentially more infectious strain had developed in South Africa by the end of the month. Within a short period of time, the new strain has appeared around the world and the question now is how governments will respond to this new challenge. Very little is known about the new variant, communication will mostly consist of encouraging the public to take the 3rd jab. If we are lucky, the current vaccines will provide enough protection against the new variant, if not then the corona virus will continue to cause problems for a long time. We do not think that there will be the repeat of the level of closures that we saw in the first or second wave.

In the US, speculation continues as to when the Fed will raise interest rates. Current pricing suggests the first hike will be next June, followed by two more. At the November Fed meeting, it was also announced that they would start the tapering by \$15 billion per month.

In Europe, the ECB President again rejected the possibility of any monetary tightening, in contrast to the Fed, stating that rising energy prices have already pushed household spending incomes into negative territory.

In Hungary, the central bank raised the benchmark interest rate by a further 30 basis points in November to 2,10%. In addition, the Hungarian National Bank reintroduced the 2-tier interest rate regime in order to stabilize the forint exchange rate. The result is that the official interest rate is 2.10% while the weekly deposit rate is 3.10%. The central bank's clear aim is to keep inflation in check without torpedoing economic growth. At the same time, they also want to stabilize the forint exchange rate, preferably around the EUR/USD 360 level.

The fund achieved a positive return in November and outperformed the benchmark index. The fund is overweight at 102% against the benchmark index, but during the month we sold the Japanese and German overweight and brought the US up to neutral. In November we bought back a small amount of cannabis exposure. This is perhaps the only sector that is not affected by the higher interest rate environment, and it seems to be gaining ground in the US as full legalization is going ahead. For the rest of the year, our view of the markets are positive, although they are pegged at unrealistically high valuations, the central banks are doing their best to ensure that equity markets do not fall significantly. We will use any sell-off as a buying opportunity.
