

INVESTMENT POLICY OF THE FUND

The aim of the fund is to function as a stable, low-risk investment vehicle, but to offer investors better returns than the performance of the current benchmark index, which may differ from interest rates depending on market conditions. The fund is a standard variable net asset value money market fund.

The portfolio elements are selected in accordance with the above mentioned principles and based on the EU wide regulation on money market funds. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK), and short-term instruments (e.g. deposits, repos) available on the interbank market. The fund is low-risk, but its portfolio may also contain mainly forint-, but also other foreign currency denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. To a limited extent, the fund may also invest in bonds issued or guaranteed by the OECD or G20 countries, any central-, regional- or local governments and national banks of the EU and also by the European Union, the European Central Bank or the European Investment Bank. The fund may hold securitisations, asset-backed commercial papers and also investment units and shares within the framework of the Money Market Funds Regulation.

The Fund shall have a weighted average maturity no more than 6 months, and a weighted average life no more than 12 months. Moreover, the Fund shall also be allowed to invest in money market instruments with a residual maturity until the legal redemption date of less than or equal to 2 years, provided that the time remaining until the next interest rate reset date is less than or equal to 397 days.

The fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk (the difference between the currency risk exposure of the derivative instrument and the hedged instrument can be maximum 5%).

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

Year-on-year inflation may have peaked in November, so a gradual slowdown in the pace of price increases is expected from December. The December policy meeting continued the cycle of interest rate hikes, with another 30 basis point tightening, leaving the base rate at 2.4%. However, due to recent risks, the rate on the one-week deposit tender has diverged from the floor, rising to 4% by the end of the month. At the December rate-setting meeting, it was announced that interest rate hikes would continue from now on at a monthly rather than weekly pace. The Monetary Council also changed the interest rate corridor, raising the lower bound by 80 basis points and the upper bound by 30 basis points, in order to continue the rate hikes. Despite the weekly interest rate hikes, the forint did not strengthen much against the euro, ending the year above 369. The first discount bond issue was also made during the month, for which the central bank accepted all bids submitted. During December, the average yield on 3-month DKJ auctions fell from 2.81% to 2.36% due to the large maturities at the end of the year, while demand for 12-month DKJs was not as strong, with the average yield rising to 3.72%.
