

## INVESTMENT POLICY OF THE FUND

The Fund aims to profit from the returns on global equity market investments through stock prices and dividend income. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of shares of foreign companies issued through public offerings, but the Fund may also invest in shares issued by Hungarian companies. The proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

## MARKET SUMMARY

In January, investors almost completely forgot about what has been weighing on their investment decisions over the past two years. It seems that the Omicron variant of the Covid virus, although spreading much faster, has a much weaker impact on humans than previous variants. The strain on the health infrastructure is not as great and the mortality rate is significantly lower. This was good news, because it meant that investors could finally focus on the things that would affect the long-term course of the economy. It was a cold shower for the markets that after the rate decision meeting in January, Fed Chairman Jay Powell stated in the strongest possible terms that now the Fed's leaders could see that their inflation expectations of last year had not been met, that inflation was significantly higher than they had expected and that they would therefore do everything possible to bring inflation down to the Fed's preferred level in 2022. The chairman outlined a plan that caused panic in the markets. According to these plans, the tapering would be drastically accelerated and interest rates would be raised as early as March. This was not well received by the markets and investors suffered the worst January sell-off ever. The ECB is facing similar problems to the US Federal Reserve. Inflation is already significant factor in Europe, but the ECB is reluctant to raise interest rates. What has been a particular problem over the past month is that energy prices have soared. This is affecting the performance of the economy, but the biggest problem is that the inflation figures remain very high.

The Hungarian National Bank continued to raise interest rates in January in response to the high inflation figures. The base rate was increased by 50 basis points to 2.90% while the one-week deposit rate was raised by 30 basis points to 4.30%. The EURHUF exchange rate finally reacted to the continuous rate hikes, falling from 370 to 352.

The fund posted a negative return in January, but outperformed the benchmark index. The fund has traded a lot in the markets over the past month. At the beginning of January, a small underweight was created by selling Nasdaq futures and at the end of the selling wave the fund went slightly overweight by buying mainly technology stocks. Our view is that there will be more violent movements in the markets this year, and we would like to take advantage of these opportunities.
