

## INVESTMENT POLICY OF THE FUND

The aim of the fund is to benefit on the economical growth of emerging countries. The fund accomplishes this goal basically via individual equity investments, however it may also hold collective investment instruments, if it is necessary for the efficient management of the portfolio. These can primarily be ETFs listed on the stock exchange, and open-end public investment funds. In the course of selecting the equities the Fund dedicates special attention to the compliance of individual companies with ESG (environmental, social, governance) criteria, so in addition to analyzing the financial factors, Portfolio managers also take into consideration environmental, social and governance factors during the investment decision making process. The Fund Manager seeks to build a portfolio in which the positive ESG characteristics of companies prevail, i.e. companies with high ESG scores are overrepresented in the portfolio as compared to companies with low ESG scores. The environmental criterion covers the elements where a business interacts with the environment. Environmental criteria include elements in the course of which the company comes into contact with the environment. These include for example the energy utilization, waste management, pollutant emission and/or the preservation of natural resources. Social criteria include all relations maintained by the company with its external partners, customers and internal employees. Corporate governance criteria are legal factors impacting reliable operation of a company. The Fund's main strategy is to provide broad emerging equity market exposure and to achieve performance above the emerging market index through active equity market allocation. An active strategy enables the Fund to achieve a return in excess of the benchmark. The Fund's risk exposure due to its geographical distribution is close to the benchmark.

## MARKET SUMMARY

The protracted conflict between Russia and Ukraine is likely to mean that the consequences of war will haunt the world's economies for a long time to come. If we analyze just the economic effects, we see that many things have happened that were previously unthinkable to happen to a nuclear superpower. The Russian central bank's reserves held in foreign banks has been frozen and seven Russian banks have been cut off from the SWIFT system. It is too early to analyze the long-term effects of these decisions, but it is likely to fundamentally reshape the financial world.

The war could also affect the US Federal Reserve's interest rate policy. The Fed has recently communicated that it will focus on inflation and raise interest rates. Never before has the US Federal Reserve raised interest rates when nuclear power initiated a war. The problem is that the war has exacerbated inflationary trends, so the Fed has to respond in some way. At its March policy meeting, it raised its benchmark rate by 25 basis points, which seems ridiculous in the face of inflation of nearly 7%. Of course, US investment banks are also not willing to miss the predictions, and Goldman Sachs expects not 4 but 5 more US rate hikes next year, in addition to the 6 for this year.

The MNB continued to raise interest rates in March in response to the high inflation figures. In March, the MNB raised the base rate by 100 basis points to 4.40% and the one-week deposit rate from 4.60 to 6.15. The EURHUF exchange rate was highly volatile in March due to the Russian-Ukrainian conflict. It reached a new all-time high of 400 forints against the euro at the beginning of the month, but as the National Bank raised interest rates the forint strengthened and returned to 370 by the end of the month.

The fund posted a negative return in March and underperformed the benchmark index. At the beginning of the month we managed to buy OTP and Erste shares at very attractive levels, of which Erste was sold at a profit during the month. We also reduced our overweight in China during the month as the Chinese economic stimulus is not coming in at the pace we had expected, making it difficult to maintain the economic growth expected by the Chinese government. In addition, after 2 years of being overweight, we have also moved Taiwan back to neutral and Korea and Thailand exposure to underweight. In contrast, we have increased the weight of the major commodity exporters in Latin America. The fund is slightly overweight against the benchmark index at 105%.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	100% MSCI EM (EMERGING MARKETS) ESG
