

INVESTMENT POLICY OF THE FUND

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible.

Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union.

The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

MARKET SUMMARY

The protracted conflict between Russia and Ukraine is likely to mean that the consequences of war will haunt the world's economies for a long time to come. If we analyze just the economic effects, we see that many things have happened that were previously unthinkable to happen to a nuclear superpower. The Russian central bank's reserves held in foreign banks has been frozen and seven Russian banks have been cut off from the SWIFT system. It is too early to analyze the long-term effects of these decisions, but it is likely to fundamentally reshape the financial world.

The war could also affect the US Federal Reserve's interest rate policy. The Fed has recently communicated that it will focus on inflation and raise interest rates. Never before has the US Federal Reserve raised interest rates when nuclear power initiated a war. The problem is that the war has exacerbated inflationary trends, so the Fed has to respond in some way. At its March policy meeting, it raised its benchmark rate by 25 basis points, which seems ridiculous in the face of inflation of nearly 7%. Of course, US investment banks are also not willing to miss the predictions, and Goldman Sachs expects not 4 but 5 more US rate hikes next year, in addition to the 6 for this year.

The MNB continued to raise interest rates in March in response to the high inflation figures. In March, the MNB raised the base rate by 100 basis points to 4.40% and the one-week deposit rate from 4.60 to 6.15. The EURHUF exchange rate was highly volatile in March due to the Russian-Ukrainian conflict. It reached a new all-time high of 400 forints against the euro at the beginning of the month, but as the National Bank raised interest rates the forint strengthened and returned to 370 by the end of the month.

The fund achieved a positive return in March. On the equity side, the regional bank weighting was increased by buying OTP and Erste. We further increased the fund's exposure to the uranium sector, but the equity weight is still slightly below the neutral level. In March we further increased the commodity weight by buying ETFs. In individual commodity exposures, we bought some gold, reduced the May crude oil shorts but kept the June long positions unchanged, as the price fell we further reduced the lumber shorts, and also bought a small amount of wheat. On the currency side, as the forint strengthened against the euro, we bought euros, so by the end of the month we are short about 20% forint against the euro.
