

INVESTMENT POLICY OF THE FUND

The Fund's objective is to establish a portfolio for its Investors that generates positive returns – higher than the yields available on the domestic money market – under all circumstances, i.e. the Fund pursues a “total return” strategy. The Fund seeks to achieve this goal by selecting, through various analytical techniques, the asset classes and investment funds that have the greatest price growth potential and make investments through the purchase of investment units and collective investment securities. The Fund invests primarily in investment funds managed by Aegon Magyarország Befektetési Alapkezelő Zrt., but may also purchase other investment funds and collective investment securities in its portfolio for diversification purposes or if the given asset class is not yet covered by the Fund Manager's funds. In order to ensure liquidity, the Fund may hold in its portfolio discount treasury bills and government bonds issued by the Government Debt Management Agency (ÁKK), interest-bearing securities guaranteed by the Hungarian State, and bonds issued by the MNB. As the range of possible investments includes investments denominated in foreign currency, ETFs and investment units, the Fund's investors may also bear some foreign exchange risk. According to the Fund's investment policy, it invests or may invest more than 80 percent of its assets in investment units or other securities issued by a collective investment undertaking. However, the Fund does not intend to hold more than 20% weight in any one investment fund, except for the Aegon Money Market Fund, Aegon Domestic Bond Fund, Aegon MoneyMaxx Total Return Fund, Aegon Alfa Absolute Investment Fund, Aegon Bondmaxx Absolute Return Bond Fund, Aegon Maraton Active Mixed Fund, Aegon Panoráma Derivative Fund and Aegon ÓzonMaxx Absolute Return Fund, the weight of which may be as much as 100% within the Fund's portfolio.

MARKET SUMMARY

The protracted conflict between Russia and Ukraine is likely to mean that the consequences of war will haunt the world's economies for a long time to come. If we analyze just the economic effects, we see that many things have happened that were previously unthinkable to happen to a nuclear superpower. The Russian central bank's reserves held in foreign banks has been frozen and seven Russian banks have been cut off from the SWIFT system. It is too early to analyze the long-term effects of these decisions, but it is likely to fundamentally reshape the financial world.

The war could also affect the US Federal Reserve's interest rate policy. The Fed has recently communicated that it will focus on inflation and raise interest rates. Never before has the US Federal Reserve raised interest rates when nuclear power initiated a war. The problem is that the war has exacerbated inflationary trends, so the Fed has to respond in some way. At its March policy meeting, it raised its benchmark rate by 25 basis points, which seems ridiculous in the face of inflation of nearly 7%. Of course, US investment banks are also not willing to miss the predictions, and Goldman Sachs expects not 4 but 5 more US rate hikes next year, in addition to the 6 for this year.

The MNB continued to raise interest rates in March in response to the high inflation figures. In March, the MNB raised the base rate by 100 basis points to 4.40% and the one-week deposit rate from 4.60 to 6.15. The EURHUF exchange rate was highly volatile in March due to the Russian-Ukrainian conflict. It reached a new all-time high of 400 forints against the euro at the beginning of the month, but as the National Bank raised interest rates the forint strengthened and returned to 370 by the end of the month.

The fund posted a slight negative return in March. Among the fund's investments, the Panorama fund managed to increase its value significantly, while unfortunately Alfa and Marathon suffered a slight fall, while Moneymaxx had a negative impact on the fund's performance due to the volatile market environment and the sell-off in the bond markets.

GENERAL INFORMATION
