

INVESTMENT POLICY OF THE FUND

The objective of the fund is to get a share of the yields of the Turkish equity market, and to benefit on the Turkish economy growth through equity rates and dividends incomes. In accordance with the risk features of the equity investments, the fund is considered as a high-risk investment. According to the intentions of the Fund Manager, the portfolio of the Fund is predominantly formed by equities publicly issued by foreign companies, so the ratio of equities in the fund may reach the legal maximum at the time. Primary targets of investment are the equities of companies listed on the stock that operate in Turkey or make most of their revenues in those countries. The fund registers its assets in Hungarian Forint, the Fund Manager is entitled to cover part of all the currency risks with forward currency positions, while complying with the effective legal provisions.

MARKET SUMMARY

Although the war between Russia and Ukraine is still ongoing, the investment world is much more concerned about inflation and how central banks will respond to it. Inflation around the world is at multi-decade highs. In the Eurozone it is at levels that is similar the early 2000s, in the US it is at a 40-year high, while Hungary has also not seen such high inflation for more than 20 years. The question on everyone's mind is what central banks will do to curb inflation, and whether they can do anything at all.

In March, the US Federal Reserve raised the Fed Funds rate by 25 basis points, which seems ridiculous in the face of inflation of almost 9%. The Fed is not in an easy position. If it raises rates too high, it could very easily create a recession, but if it raises them by only 25-50 basis points, it could be too slow and inflation could rise further. Let's not forget that over the past decade, the US national debt has more than doubled and a sustained rise in interest rates would be disastrous for the US economy. Europe is not better off. Since the 2008-2009 crisis, the ECB's main task has been to support the bond markets of the South-European countries by continuously buying them. If the ECB also raises interest rates, it will hit the South-European countries very badly, and some of them could enter into bankruptcy.

The MNB continued to raise interest rates in April in response to high inflation figures. In April, the MNB raised the base rate by 100 basis points to 5.40% and the one-week deposit rate to 6.45%. The EURHUF exchange rate was highly volatile in April due to the Russian-Ukrainian conflict. During the month, the forint weakened from 367 to 377 against the euro. Currently, higher interest rates are unable to strengthen the Hungarian currency.

The fund achieved a positive return in April, but underperformed the benchmark index. The fund is at 99% against the benchmark index. It is not at 100% because two local stocks cannot be bought due to legal barriers. We closed the previous overweight in the auto sector after the shares reached their target price, but in response to geopolitical risks we have established an overweight in the oil refining sector. We are taking a wait-and-see stance on the other sectors, wanting to see more clearly how the Russia-Ukraine war is developing and what the consequences of this will be for the Turkish economy. In local currency terms, the Turkish market has risen a lot as local investors are trying to hedge the 60% inflationary impact through the equity markets. These investors are mainly buying shares in export companies whose earnings are denominated in dollars.
