

## INVESTMENT POLICY OF THE FUND

The Fund is an absolute return investment fund that aims to create an investment portfolio through active portfolio management that achieves a return for its clients in excess of the benchmark, taking into account a predetermined risk profile. It intends to accomplish this goal primarily by investing on the bond market of the emerging European region. When implementing the Fund's investment strategy, the Fund Manager focuses primarily on emerging European hard-currency (dollar, euro) government and corporate bonds, leveraging its regional expertise. For diversification purposes, the Fund may also purchase other bonds (government securities, corporate bonds, mortgage bonds) typically issued in the region and denominated in local currency, and in addition, it may also conclude forward and other derivative transactions in order to establish an efficient portfolio. We aim to achieve a moderate risk profile when compiling the Fund's portfolio. The Fund makes its investments based on an extensive analysis of the issuer's creditworthiness, including a comprehensive assessment of the risks involved, especially with regard to non-investment grade issuers. The Fund may only conclude derivative transactions for hedging purposes, or in the interest of improving portfolio efficiency. The Fund may also hold units of non-leveraged collective investment schemes that track derivative indices. The Fund may also take on significant foreign currency exposure, which is normally fully covered by the Fund Manager, but depending on market conditions, the Fund may have an open foreign currency position. The Fund seeks to provide returns to its investors primarily through its bond investments.

## MARKET SUMMARY

Jerome Powell said the Fed will need to see "clear and convincing" proof that inflation is decreasing, otherwise the central bank will have to move "more aggressively". US retail sales rose strongly, easing fears of a forthcoming slowdown. EC President Ursula Von der Leyen announced that about EUR 300BB would be made available to member states to end Russian energy imports by 2030, largely from unused RRF loans. Eurozone inflation leaped further to 8.1% YoY last month. The Brent (oil) price temporarily hit \$124/bbl after the relaxation of COVID-19-related restrictions in China and the EU's partial ban of oil imports from Russia along with the OPEC+ cartel announced an increase in its oil production. Record-high Eurozone inflation rates sent European GB yields climbing. The 10Y Bund yield increased by 16bp, the 10Y UST yield decreased by almost 9bp and hasn't been able to stay below 2.75% for more than a day, closed the month at 2.84%. Equity markets continued their stabilization efforts, while growth concerns and cautious company reports weighed on sentiment. Despite volatile yields in European credit markets, high yield outperformed investment grades, suggesting that investors are becoming less concerned about credit risk than they are about duration risk. In FX, EUR-USD regained 1.07 after a brief slide to 1.038. The fund still keeps its Ukrainian and the remaining part of the Russian corporate exposure and waits for improvement in the Ukrainian-Russia war.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 0.4%
