

## INVESTMENT POLICY OF THE FUND

The objective of the fund is to get a share of the yields of the Turkish equity market, and to benefit on the Turkish economy growth through equity rates and dividends incomes. In accordance with the risk features of the equity investments, the fund is considered as a high-risk investment. According to the intentions of the Fund Manager, the portfolio of the Fund is predominantly formed by equities publicly issued by foreign companies, so the ratio of equities in the fund may reach the legal maximum at the time. Primary targets of investment are the equities of companies listed on the stock that operate in Turkey or make most of their revenues in those countries. The fund registers its assets in Hungarian Forint, the Fund Manager is entitled to cover part of all the currency risks with forward currency positions, while complying with the effective legal provisions.

## MARKET SUMMARY

The Russian-Ukrainian conflict has been completely pushed into the background, and investors are almost exclusively interested in the impact of the war on inflation around the world. Food prices have already risen significantly as both Ukrainian and Russian grain exports have fallen sharply. Energy prices are also at a decade high, but here the price rise is mostly due to refined products. The US Federal Reserve is in a serious dilemma. In May, the biggest retail chains published their quarterly reports, and almost all reported weaker-than-expected results. This already suggests that the US economy is in a possible recession, even if the macroeconomic numbers do not yet show it. The Fed is still communicating that we can expect 50 basis point hikes and a large reduction in the bond portfolio in the coming period. The ECB is in similar situation to the Fed. The impact of the war in Europe is being felt in full force, and the inflationary impact is even higher. Natural gas prices have seen an unprecedented rise, but gasoline prices have also hit a record high. In Germany, annual inflation rose to 8.70%, a 60-year high. The Hungarian central bank continued to raise interest rates in May in response to the high inflation figures. In May, the MNB raised the base rate by 50 basis points to 5.90% and the one-week deposit rate to 6.75%. The EURHUF exchange rate was highly volatile in May due to the Russian-Ukrainian conflict. During the month, the forint weakened from 375 to 397 against the euro. At the moment, higher interest rates are unable to strengthen the Hungarian currency.

The fund posted a negative return in May and underperformed its benchmark index. Inflation remains extremely high in Turkey, and foreign investors are extremely underweight in this market. The Turkish lira weakened further in May, which was also inflationary. We started to actively take positions in the fund, and mainly bought high quality export oriented companies. In contrast, we are underweight firms that are mainly positioned for domestic consumption, because we believe that these firms cannot fully pass on the impact of inflation, as Turkish producer inflation is higher than consumer inflation.

## GENERAL INFORMATION
