## Aegon Central European Equity Fund

### INVESTMENT POLICY OF THE FUND

The objective of the fund is to invest in Central and Eastern European equities market. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, and secondarily Slovenia, Croatia, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. For the sake of efficient establishment of the fund's portfolio, forward stock index deals can also be applied. In order to ensure liquidity, the fund intends to hold state securities issued by ÁKK, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100% share of bonds in the portfolio.

### **MARKET SUMMARY**

The Russian-Ukrainian conflict has been completely pushed into the background, and investors are almost exclusively interested in the impact of the war on inflation around the world. Food prices have already risen significantly as both Ukrainian and Russian grain exports have fallen sharply. Energy prices are also at a decade high, but here the price rise is mostly due to refined products. The US Federal Reserve is in a serious dilemma. In May, the biggest retail chains published their quarterly reports, and almost all reported weaker-than-expected results. This already suggests that the US economy is in a possible recession, even if the macroeconomic numbers do not yet show it. The Fed is still communicating that we can expect 50 basis point hikes and a large reduction in the bond portfolio in the coming period. The ECB is in similar situation to the Fed. The impact of the war in Europe is being felt in full force, and the inflationary impact is even higher. Natural gas prices have seen an unprecedented rise, but gasoline prices have also hit a record high. In Germany, annual inflation rose to 8.70%, a 60-year high. The Hungarian central bank continued to raise interest rates in May in response to the high inflation figures. In May, the MNB raised the base rate by 50 basis points to 5.90% and the one-week deposit rate to 6.75%. The EURHUF exchange rate was highly volatile in May due to the Russian-Ukrainian conflict. During the month, the forint weakened from 375 to 397 against the euro. At the moment, higher interest rates are unable to strengthen the Hungarian currency.

The fund achieved a positive return in May, but slightly underperformed its benchmark index. At the sector level, the oil and utilities sectors were the main contributors to the fund's return. We have reduced the Hungarian weight in May due to negative economic news, as we believe that the new taxes could cause the Hungarian market to underperform the regional markets in a similar way as it did in 2012-2014. In contrast, we have further increased the weight of the Austrian market. In the region, the Czech, Polish and Austrian markets performed well, while the Hungarian market lagged significantly behind. At country level, the Czech weight was reduced, while the Austrian and Romanian weights were increased and the Polish underweight was closed. At the sector level, we increased the consumption sector and in some companies took profits in the utilities sector. Overall, the fund is overweight against the benchmark index at around 112% due to long positions.
