

INVESTMENT POLICY OF THE FUND

The fund's aim is to earn capital gains by taking positions in a wide range of assets while keeping risk under pre-defined limits. The assets are selected based on fundamental and technical criteria from the widest range of industry and country exposures possible. Based on medium and long-term trends, the fund can buy or sell equities, bonds and other securities, and take various exposures using exchange (futures, options) and OTC derivatives (IRS and currency forwards). Naked shorts on securities are not allowed. The manager selects and builds positions based on fundamental and technical analysis in such a way, that the fund's return can exceed that of bank deposits over a medium-term horizon. Equally important focus is given to risk management which targets Level 5 risk bracket. The fund is not targeting any specific sectors, countries or asset classes, but most of its exposures will be taken on US and European exchanges, or markets regulated by the capital market authorities of the United States of America and the countries of the European Union. The fund's net corrected risk exposure may go up to 200 percent of the portfolio, in accordance with the Hungarian capital market acts and regulations. The fund can also run a net short exposure, also in accordance with the above mentioned regulatory limits.

MARKET SUMMARY

The Russian-Ukrainian conflict has been completely pushed into the background, and investors are almost exclusively interested in the impact of the war on inflation around the world. Food prices have already risen significantly as both Ukrainian and Russian grain exports have fallen sharply. Energy prices are also at a decade high, but here the price rise is mostly due to refined products. The US Federal Reserve is in a serious dilemma. In May, the biggest retail chains published their quarterly reports, and almost all reported weaker-than-expected results. This already suggests that the US economy is in a possible recession, even if the macroeconomic numbers do not yet show it. The Fed is still communicating that we can expect 50 basis point hikes and a large reduction in the bond portfolio in the coming period. The ECB is in similar situation to the Fed. The impact of the war in Europe is being felt in full force, and the inflationary impact is even higher. Natural gas prices have seen an unprecedented rise, but gasoline prices have also hit a record high. In Germany, annual inflation rose to 8.70%, a 60-year high. The Hungarian central bank continued to raise interest rates in May in response to the high inflation figures. In May, the MNB raised the base rate by 50 basis points to 5.90% and the one-week deposit rate to 6.75%. The EURHUF exchange rate was highly volatile in May due to the Russian-Ukrainian conflict. During the month, the forint weakened from 375 to 397 against the euro. At the moment, higher interest rates are unable to strengthen the Hungarian currency. The fund achieved a positive return in May. During the month we reduced the negative duration from 3 to 1 year. On the commodity side, we sold soybeans when they reached our target price. We bought oil several times, but we bought it twice and it and sold it with little profit until finally on the third buy it broke out and went to \$120. We also sold this position because the difference between the first and second month indicated that the price was not sustainable. We also sold gold because it went up very little compared to the fact that inflation is at a multi-decade high and a nuclear power is at war. At the beginning of the month we reduced the equity weight to 10% with sales of Erste and OTP, but we started to re-increase the equity exposure at the bottom of the selling wave by buying different equity sectors. We are cautious on the equity asset class going forward, our view is that higher interest rates will be negative for these investments, while we are still positive on commodities, but there we are already seeing some sector weaknesses. On the FX side, we have reduced our exposure to the forint to 10%, but we don't want to go lower than that.
