

INVESTMENT POLICY OF THE FUND

The Fund aims to profit from the returns on global equity market investments through stock prices and dividend income. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of shares of foreign companies issued through public offerings, but the Fund may also invest in shares issued by Hungarian companies. The proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

In July, the focus for investors remained on inflation and whether central banks can and will do anything about it. Although the US and European central banks have raised interest rates, these levels are still a long way from being able to make a meaningful impact on inflation. This situation is likely to persist for the rest of the year until investors are convinced that inflation has indeed peaked. The US Federal Reserve raised interest rates again in July by 75 basis points, so the Fed fund's rate is now 2.50%, which is very low compared to inflation of 9%. Perhaps the biggest challenge facing the Fed is to maintain its creditworthiness. If the markets perceive that the Fed does not want to keep interest rates above a certain level, even though inflation is not yet under control, it may cause very serious structural problems. Europe faces even bigger problems, which the Russian-Ukrainian war escalates even further. Inflation here is also very high, but the biggest problem is the energy supply. Russian gas is not coming in as much as in the past and this is having a negative impact on economic performance. If this continues into the winter period, some forecasts suggest that European economic performance could fall by 20-30%. Hungary is no exception to the effects of inflation and the central bank is aggressively raising interest rates to curb consumption. The base rate is already 10.75% and another 100 basis point hike is priced in by the market for August. Unfortunately, Hungarian inflation is being impacted by a steadily weakening forint, but perhaps the region's highest interest rate environment will stop the Hungarian currency from weakening further. The fund achieved a positive return in July and outperformed its benchmark index. Developed market indices have performed well over the past month, mainly due to the very negative sentiment among investors. We closed the US bond ETF during the month as we believe that inflationary pressures mean that yields cannot fall much further. In addition, we bought a silver miner stock when silver it suddenly fell a lot, and this was overreacted by the mining stocks. In the fund, we still maintain a long forint position against the euro and the dollar, because we believe that the series of interest rate hikes by the Hungarian central bank will sooner or later have an impact on the forint exchange rate.
