

## INVESTMENT POLICY OF THE FUND

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Russia, Turkey), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e., the current settlement currency of the benchmark (CEE region currencies), depending on the market processes. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. There is no possibility for making individual investor decisions in respect of the Fund.

## MARKET SUMMARY

In October, investors were still trying to figure out when the US Federal Reserve would stop raising interest rates. Regional Fed governors are divided on the subject, with some expecting around 4-4.5 percent, but others are not ruling out 5-5.5 percent. Macro data shows a mixed picture. Some segments of the economy are already showing strong signs of slowing, such as housing and used car prices, but the unemployment rate still shows signs of a robust economy. Europe remains trapped by energy prices. Although the benchmark Amsterdam gas price has fallen significantly since its August peak, it is still a lot higher than last year's averages. The question is whether Europe will have enough gas to meet both residential and industrial demand. If there is, Europe can get through the winter, but if there is not enough gas, it could push the European economy into a bigger-than-expected recession.

Inflation remains very high in Hungary. In October, year-on-year inflation rose by 21.1%. The further increase in inflation was mainly driven by a further rise in food prices. Seeing these inflation figures, and the continued weakening of the forint against the euro, the MNB changed its interest rate policy. The base rate remained at 13%, but the overnight deposit was set at 18% and the top of the interest rate band was raised to 25%. The forint weakened to a new high against the euro in the middle of the month, but showed signs of strengthening at the end of the month.

The fund achieved a positive return in October, but underperformed the benchmark index. The underperformance was mainly due to the fact that our off-benchmark positions underperformed and a few stocks rose unrealistically much in a short period of time, plus at the end of the month some markets were open and others closed, so the currency valuation had a negative impact on the fund. We still believe that regional pricing is at extreme low levels, with Polish and Austrian equities in particular being extremely cheap. In addition, quarterly reports are very positive, so there is a chance, especially in the banking and oil sectors, that the worst case scenario is already priced into equities. At the sector level, we have continued to add weight in the oil and banking sectors and have reduced weight in the utilities, pharmaceuticals and gaming sectors. At the country level, Czech exposure is underweight with the rest of the region is overweight. Overall, due to long positions, the fund is overweight against the benchmark index at around 110%.
