

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

November had some positive macro data for investors in the US. Although the number of new job openings continued to rise, year-on-year inflation continued to fall, from 7.9% to 7.7%. This is very positive because the US Federal Reserve will not stop raising interest rates until the inflation rate starts to fall. The Fed's next meeting was held in early November and, as expected, they decided to raise the Fed Funds rate by 75 basis points, to 4%.

Europe continues to suffer from war-induced austerity. According to the November sentiment report of the German economic research institute IFO, which is typically one of the best indicators of the German growth rate, the index rose from 75.6 to 77, but remains depressed. Despite the weak economic data and high inflation figures, the minutes of the ECB's October rate decision meeting suggest that we can expect a 50 or 75 basis point hike from policymakers in December.

In Hungary, inflation remains very high. According to official data from the KSH, inflation was 22.5% in November. The increase, like the previous month's, is a multi-year record. The MNB did not change its base rate during the month and the forint was stable against the euro. It seems that Hungarian interest rates are now high enough to prevent the forint from weakening further. But of course, the most important factor for the forint in the short to medium term is whether or not Hungary will receive the EU funds.

The Fund achieved a positive return in November. The rally in the Hungarian bonds during the month helped the Fund's performance a lot. We continue to hold the position as the spread between Hungarian bond and the German Bund is still very high. We have closed 1/3 of the EURHUF position at the 400 level, but if the forint weakens back to the 420 level, we will reopen it. We think the markets could still rise before the end of the year, so we still hold a 5% Nasdaq long position in the fund, but if the index falls below 11500 we will stop it out.
