

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to create a highly defensive investment portfolio for its Investors, which typically invests in developed-market government bonds and related exchange-traded derivatives. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of bonds issued by foreign states and foreign companies through public offerings. With regard to foreign securities, the Fund only purchases publicly traded securities listed on a foreign stock exchange. It keeps the planned share of non-investment grade securities low. The proportion of bonds that can be held in the Fund at any given time may reach the prevailing legal maximum. In order to ensure liquidity, the Fund may purchase Hungarian government securities (primarily discount treasury bills) and MNB bonds. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

A slightly better the Composite PMI and the Ifo business climate data eased fears of a deep economic contraction in the Eurozone and is consistent with a mild technical recession around the turn of the year. The first monthly decrease in German producer prices since early 2020 on lower energy expenses indicates a softening of underlying price pressure. Both the latest FOMC minutes and the ECB account are in line with a slower pace of rate hikes of 50bp in mid-December. Thus, Fed Chair J. Powell waved that the Fed would slow the pace of rate hikes to 50bp at its December meeting, while reiterating that the terminal interest rate would likely need to be "somewhat higher" than he thought in September. Eurozone headline inflation slowed down to 10% YoY in November, while core inflation stabilized at 5%. In China, the government has announced it intends to make only mild changes to its zero-Covid strategy, while intensifying vaccination efforts for the elderly. Market sentiment improved last month, with equities extending their positive momentum across regions while turned negative at the beginning of December. UST yields fell by 40-80bp across the curve, with some bull-steepening in the 2Yvs10Y segment. EGB yields also inched lower, while the BTP-Bund spread was little changed while heading lower in the month. The US dollar weakened, with EUR-USD climbing above 1.05 and USD-JPY breaking below 135, while USD-CNY is heading back towards 7.00. We slightly increased exposure to France and further decreased the U.K. risk, closed positions in Portugal and Finland along with initiating positions in Australian and Canadian government papers, stayed at the neutral levels overall.
