

INVESTMENT POLICY OF THE FUND

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Russia, Turkey), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e., the current settlement currency of the benchmark (CEE region currencies), depending on the market processes. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

November had some positive macro data for investors in the US. Although the number of new job openings continued to rise, year-on-year inflation continued to fall, from 7.9% to 7.7%. This is very positive because the US Federal Reserve will not stop raising interest rates until the inflation rate starts to fall. The Fed's next meeting was held in early November and, as expected, they decided to raise the Fed Funds rate by 75 basis points, to 4%.

Europe continues to suffer from war-induced austerity. According to the November sentiment report of the German economic research institute IFO, which is typically one of the best indicators of the German growth rate, the index rose from 75.6 to 77, but remains depressed. Despite the weak economic data and high inflation figures, the minutes of the ECB's October rate decision meeting suggest that we can expect a 50 or 75 basis point hike from policymakers in December.

In Hungary, inflation remains very high. According to official data from the KSH, inflation was 22.5% in November. The increase, like the previous month's, is a multi-year record. The MNB did not change its base rate during the month and the forint was stable against the euro. It seems that Hungarian interest rates are now high enough to prevent the forint from weakening further. But of course, the most important factor for the forint in the short to medium term is whether or not Hungary will receive the EU funds.

The fund achieved a positive return in November and outperformed the benchmark index. The outperformance was mainly due to good stock allocation. The overweight Polish, Hungarian and Austrian stocks were the best performers, while the underweight Czech stocks underperformed. At the end of the month, we cut back from the Polish overweight as we believe that the Polish market has rallied a lot in a short period of time. On the sector level, the retail, financials and energy sectors performed well in November, while utilities, pharmaceuticals and real estate were laggards. Overall, the fund is overweight against the benchmark index at around 105% due to long term positions.
