

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

With falling yields, the performance of the Polish bond market was strong in November. Yields were down 165 basis points at the three-year maturity, 173 basis points at the five-year maturity and 176 basis points at the ten-year maturity. The main reason behind falling yields: the US inflation data for October came below market expectations, which resulted in lower rate hike expectations from the Fed and potentially rate cut expectations already in 2023. Contrary to expectations, at the rate decision meeting in early November, the central bank did not change its interest rate conditions. The base rate thus remained at 6.75%. Although the communication theoretically leaves the door open for further rate hikes, this was the second consecutive month, when the central bank left the base rate unchanged. In spite of this, the central bank increased the inflation forecasts both for this and the next year. Now the expectation is, that inflation will be around 14,4% – 14,5% this year. The 2023 average inflation however will be between 11,1 – 15,3%. The GDP forecast was revised up to between 4,3% and 4,9% this year. But for the next year GDP growth forecast was revised down to between -0,3% and 1,6%. Preliminary data for November showed that inflation started to slow down, the year-on-year data arrived at 17,4% below market expectations of 18%. The main driver could have been the slowdown in prices for personal transport equipment. But the electricity and food prices may have continued to rise. The purchasing managers' index increased, with the manufacturing index rising to 43,4 from 42 the previous month. Output and new orders continued to fall as high inflation and an uncertain economic environment weighed on demand. Industrial production grew by 6.8% in October, but arrived below market expectations of 7.8%. As for public finances, the state generated a deficit of PLN 222.66 million in October, bringing the 12-month rolling budget deficit to 1.73% of GDP.

Our higher Polish duration exposure and other carry assets (including remaining Ukrainian bonds) performed well during the month and as a result we outperformed our benchmark. After the recent rally, we plan to sell approximately 1/3 of our remaining Ukrainian exposure.
