

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In November, YoY inflation rose to 22,5%. Further increase in inflation were mainly driven by further rise in food prices. The tightening of the energy price support scheme will continue to affect the year/year inflation rate until next September, barring further changes. Inflation may peak in early 2023, but the level will largely depend on when the price caps will be phased out. The fuel price cap was supposed to be in effect until the end of the year, but the current supply problems forced the government to scrap the 480 HUF cap in the beginning of December. The announcement will increase the December inflation more, but will have a smaller effect on the January data as well. The Central Bank left the base rate unchanged in the November rate setting meeting, thus it stayed at 13% and the ON deposit rate at 18%. The government however announced in the middle of the month, that it will cap interest rates on deposits of financial companies and wealthy private individuals at the three month discount bill auction rate. So the 18% effective rate is now only available for banks. Thus the monetary transmission mechanism has been weakened further. After the announcement the demand for shorter T-bills increased, the average yield at the 3-month T-bill auction decreased below 13%. But after a couple of days, the issued amount followed the bigger demand, so the normalization of yields has also started. With being closer to the peak of inflation, we continued to buy longer term papers.
