

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

December saw some mixed movement in the Polish bond market. While there was some strengthening at the short end of the yield curve, the five and ten-year yields ended December 20 and 45 basis points higher. The Polish central bank did not change its interest rate conditions at its rate decision meeting in early December, and the base rate remains at 6.75%. The majority of the Monetary Council believes that this interest rate level is optimal and that inflation will move towards the central bank's target without a significant deterioration in economic stability. In the third quarter, year-on-year the Polish GDP growth was 3.6% and the Bloomberg consensus is for full-year growth is 4.7%. According to preliminary data the December inflation fell year-on-year, ending well below market expectations (17.4%) at 16.6%. The main reason for the moderation in inflation is that the pace of price increases has started to slow, with energy and fuel prices already declining slightly compared to the previous month. The Purchasing Managers' Index continued to rise, with the manufacturing index rising to 45.6 from 43.4 in the previous month. Some improvement is already seen in the index, but it is still below the 50 mark, as output and new orders are still declining due to the uncertain economic environment and high inflation. Industrial production grew by 4.6% in November, beating market expectations of 2%. As for public finances, the state generated a deficit of PLN 8,959 million in October, bringing the 12-month rolling budget deficit to 1.98% of GDP.
