

INVESTMENT POLICY OF THE FUND

The Fund's objective is to establish a portfolio for its Investors that generates positive returns – higher than the yields available on the domestic money market – under all circumstances, i.e. the Fund pursues a “total return” strategy. The Fund seeks to achieve this goal by selecting, through various analytical techniques, the asset classes and investment funds that have the greatest price growth potential and make investments through the purchase of investment units and collective investment securities. The Fund invests primarily in investment funds managed by Aegon Magyarország Befektetési Alapkezelő Zrt., but may also purchase other investment funds and collective investment securities in its portfolio for diversification purposes or if the given asset class is not yet covered by the Fund Manager's Agency (ÁKK), interest-bearing securities guaranteed by the Hungarian State, and bonds issued by the MNB. As the range of possible investments includes investments denominated in foreign currency, ETFs and investment units, the Fund's investors may also bear some foreign exchange risk. According to the Fund's investment policy, it invests or may invest more than 80 percent of its assets in investment units or other securities issued by a collective investment undertaking. However, the Fund does not intend to hold more than 20% weight in any one investment fund, except for the Aegon Money Market Fund, Aegon Domestic Bond Fund, Aegon MoneyMaxx Total Return Fund, Aegon Alfa Absolute Investment Fund, Aegon Bondmaxx Absolute Return Bond Fund, Aegon Maraton Active Mixed Fund, Aegon Panoráma Derivative Fund and Aegon ÓzonMaxx Absolute Return Fund, the weight of which may be as much as 100% within the Fund's portfolio.

MARKET SUMMARY

In December, US inflation fell further to 7.1% from the expected 7.3%. This was seen as a positive by investors, as the pressure on the US Federal Reserve to raise interest rates in this cycle has been reduced. Although in December the Fed raised its benchmark rate by another 50 basis points to 4.5%, the weaker inflation data means there is a chance that they will stop raising rates sooner than previously thought. As a result, the dollar weakened to a 6-month low against the euro.

In China there has been a radical turnaround in the handling of the Covid epidemic. The previous zero-tolerance has been reversed, Covid restrictions have been relaxed, PCR tests are no longer required to use public transport in many cities and in many places citizens who test positive can recover at home. The Chinese premier said that the policy of economic opening now underway would be maintained, with further steps to come. China's top health official said the current outbreak of the omicron was no more serious than the flu and the relaxations were justified. Macro data in the coming months will show how badly the Chinese economy has been damaged by the Covid outbreak.

Inflation in Hungary remains extremely high. According to official data from the Hungarian Central Statistical Office, inflation was 22.50% in December, a multi-decade high and the highest in Europe. During the month, the MNB did not change the base rate and the forint was stable against the euro. It seems that Hungarian interest rates are now high enough to prevent the forint from weakening further. On the last day of the year, one euro was worth 400 forints.

The fund's NAV fell slightly in December. Bond markets reversed their November performance and ended the month lower, with Hungarian bond issues falling more and US bonds a little less. Accordingly, the average maturity that was cut at the very beginning of December performed well, with the RMAX, an index of shorter-dated Hungarian instruments, closing in positive territory. Absolute return funds held by the portfolios performed mixed. The fall in Hungarian bond prices negatively impacted the Alfa and Maraton exposures, but Panorama closed in positive territory, while Moneymaxx was almost unchanged.
