

## INVESTMENT POLICY OF THE FUND

The Fund is an absolute return investment fund that aims to create an investment portfolio through active portfolio management that achieves a return for its clients in excess of the benchmark, taking into account a predetermined risk profile. It intends to achieve this objective primarily through asset allocation in global bond markets. The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective. The Fund may also invest in collective investment schemes in order to achieve appropriate diversification. The fund may also purchase non-investment grade bonds. The fund may also use interest rate derivative instruments to hedge positions or to efficiently construct the desired exposure. The Fund may also take foreign currency positions but may also hedge foreign currency positions using foreign currency derivatives.

## MARKET SUMMARY

Last month, both major central banks, the Fed and the ECB, raised their policy rates by 50 basis points, set off hawkish and indicated that further tightening is needed to ensure a timely return of inflation to target. On the data front, in the US, the CPI print for November pointed to cooling inflation, while retail sales fell. Eurozone PMIs signalled milder contraction amid easing price pressure. In China, industrial production and retail sales data showed meaningful deterioration. The boost to risk appetite from US CPI was progressively reabsorbed as hawkish central-bank comments were digested and global equities look set to finish the week in the red. The 10Y UST yield moved higher and almost reached the 3.90% area and EGB yields rose more sizably, with curves bear-flattening and periphery spreads widening. The 2Y Schatz yield climbed to its highest level since 2008, and the 10Y BTP-Bund spread widened to 215bp. In FX, EUR-USD tested 1.07 before falling back, while EUR-GBP rebounded to 0.87. The fund still keeps its Ukrainian exposure, and waits for improvement in the Ukrainian-Russia war; we decreased exposure to Qatar, added the US and German government bonds with further intention to raise exposure to the core rates markets while decreasing Hungarian risk further.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 2%
ISIN code:	HU0000709597
Start:	01/12/2011
Currency:	HUF
Net Asset Value of the whole Fund:	15,316,232,380 HUF
Net Asset Value of A series:	1,689,295,590 HUF
Net Asset Value per unit:	1.373757 HUF
