

## INVESTMENT POLICY OF THE FUND

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the

Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

## MARKET SUMMARY

In December, US inflation fell further to 7.1% from the expected 7.3%. This was seen as a positive by investors, as the pressure on the US Federal Reserve to raise interest rates in this cycle has been reduced. Although in December the Fed raised its benchmark rate by another 50 basis points to 4.5%, the weaker inflation data means there is a chance that they will stop raising rates sooner than previously thought. As a result, the dollar weakened to a 6-month low against the euro.

In China there has been a radical turnaround in the handling of the Covid epidemic. The previous zero-tolerance has been reversed, Covid restrictions have been relaxed, PCR tests are no longer required to use public transport in many cities and in many places citizens who test positive can recover at home. The Chinese premier said that the policy of economic opening now underway would be maintained, with further steps to come. China's top health official said the current outbreak of the omicron was no more serious than the flu and the relaxations were justified. Macro data in the coming months will show how badly the Chinese economy has been damaged by the Covid outbreak.

Inflation in Hungary remains extremely high. According to official data from the Hungarian Central Statistical Office, inflation was 22.50% in December, a multi-decade high and the highest in Europe. During the month, the MNB did not change the base rate and the forint was stable against the euro. It seems that Hungarian interest rates are now high enough to prevent the forint from weakening further. On the last day of the year, one euro was worth 400 forints.

The fund posted a negative return in December. The November bond rally corrected in December and this had a negative impact on the fund's performance. This was somewhat offset by the fact that the foreign currency exposure was largely hedged. During the month, the Nasdaq and emerging market futures exposure was stopped out when certain technical levels were broken. In contrast, we continued to add to the Polish exposure due to the very fundamentals. The fund's currency exposure is 95% hedged. Our strategic view is that economies are approaching a recession phase, so we continue to hold a larger than usual bond exposure.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 1.4%
