

## INVESTMENT POLICY OF THE FUND

The aim of the Fund is to create an investment portfolio through asset allocation between and within asset classes that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. The Fund seeks investment opportunities primarily in emerging markets. In order to realise the investment objectives, the asset groups in the Fund's portfolio may be freely varied without having to adhere to any predetermined risk profile.

The Fund is a "total return" fund, which can invest in several asset classes, i.e. instead of focusing on just one sub-sector of the money or capital market, it concentrates its investments within a combination of assets that promises the highest possible return at any given time. The Fund does not aim to track a fixed benchmark, nor does it adhere to a fixed equity-to-bond portfolio ratio, but seeks to vary this ratio within broad boundaries, with the composition of the portfolio changing dynamically in order to achieve the Fund's return target. The Fund's investments focus on emerging markets. The Fund primarily allocates its assets between emerging-market local currency government securities, hard currency government and corporate bonds, and equity markets, in accordance with the latest market expectations. The Fund may thus assume interest rate risk, currency risk, credit risk, as well as equity market risk. The Fund may take positions in other regions and markets (e.g. commodity markets) besides the emerging markets. The Fund hedges most of its currency positions, but it may also take open currency positions. In the interest of efficient portfolio design, the Fund may also assume forward and futures positions.

## MARKET SUMMARY

In December, US inflation fell further to 7.1% from the expected 7.3%. This was seen as a positive by investors, as the pressure on the US Federal Reserve to raise interest rates in this cycle has been reduced. Although in December the Fed raised its benchmark rate by another 50 basis points to 4.5%, the weaker inflation data means there is a chance that they will stop raising rates sooner than previously thought. As a result, the dollar weakened to a 6-month low against the euro.

In China there has been a radical turnaround in the handling of the Covid epidemic. The previous zero-tolerance has been reversed, Covid restrictions have been relaxed, PCR tests are no longer required to use public transport in many cities and in many places citizens who test positive can recover at home. The Chinese premier said that the policy of economic opening now underway would be maintained, with further steps to come. China's top health official said the current outbreak of the omicron was no more serious than the flu and the relaxations were justified. Macro data in the coming months will show how badly the Chinese economy has been damaged by the Covid outbreak.

Inflation in Hungary remains extremely high. According to official data from the Hungarian Central Statistical Office, inflation was 22.50% in December, a multi-decade high and the highest in Europe. During the month, the MNB did not change the base rate and the forint was stable against the euro. It seems that Hungarian interest rates are now high enough to prevent the forint from weakening further. On the last day of the year, one euro was worth 400 forints.

The fund posted a negative return in December. On the bond side, we further reduced our position in long-dated, dollar-denominated emerging market government bonds in December. During the month, we managed to take advantage of a slight rise in prices and sold a small amount of euro-denominated Ukrainian paper. Our objective throughout the month was to reduce the risk of the fund. Polish yields also fell a lot last month, so we sold our entire Polish government bond exposure. The interest rate risk of the fund was reduced to 3 by the end of the month. On the equity side, we sold the Indonesian exposure and increased the exposure to China and the global emerging markets. The equity weight at the end of the month was 23%. On the FX side, we further increased the forint position against the Polish zloty, leaving the fund with a long position of 14% against the euro and the dollar, and 16% against the zloty and the Czech koruna.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 1.7%
