

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In January, the year-over-year inflation arrived at 25,7%, above market expectations. The carry-over effect of the abolition of the fuel price cap in December was reflected in the current data, so this product group saw a bigger jump in monthly growth. Contrary to market expectations, there was no rate cut at the January rate decision meeting and the previous hawkish communication was maintained. The required reserve ratio will be raised from 5% to 10% from April, and the use of discount bonds and long maturity deposit tenders will be continued. However, unlike before, discount bond auctions have been opened to financial institutions, so that fund managers can now also access MNB bonds. The bond auction announced at 18% has thus pushed short yields slightly higher. At the end of January, the 3-month DKJ auction offered an average yield of 14.21%. The average yields on 6 and 12-month DKJ fell during the month, but these also started to normalize at the beginning of February. As inflation is approaching its peak, we are gradually increasing the duration in the fund and are now open to buying longer maturity (one-year) bonds.
